

The diagram illustrates a 4x4 matrix keypad circuit. It features four columns (C0L 0_R to C0L 4_R) and four rows (Row 0_R to Row 3_R). Each column is connected to a 5V supply through a 50k resistor. Each row is connected to a 5V supply through a 50k resistor. The keypad switches are arranged in a grid. A D? Diode is connected to the right side of each switch. The circuit is powered by a 5V supply and a 50k resistor network.
